Selections are **easily identified**

Quickly verify data entries with a dynamic transaction viewer

Large touch-friendly buttons for **fast navigation**

Add up to 9 **custom buttons** and make their selection required or optional

See the Benefits
Throughout Your Organization

Customers

Give your valued customers an unparalleled experience with reduced wait times, smoother transactions and custom tickets that can be emailed to them automatically.

Scale operators

Users enjoy a sleek, intuitive user interface with a design inspired by modern visual point-of-sale systems for faster transactions, fewer errors and easier training.

Warehouse

Maintain control of what comes into and leaves your facility with access to real-time data shared on your network.

Technology and data management

Your data is secured in a powerful SQL Server database that can be deployed on a single workstation on site or on a remote server for access from multiple other workstations.

Finance and accounting

With more complete records that can be viewed with ease right in DataBridge or exported to various formats, your financial team has a powerful tool to improve cash-flow and gather insight.

Executives

Take the pulse of your operations with impressive reporting and charting capabilities, while staying informed on issues with email alerts.

DataBridge™ MS
Scale Management System

Highly visible information

Easily find historical transactions with incredible detail using intuitive grouping, sorting and filtering features. Quickly analyze trends with professional graphs.

Customized user roles

Create an unlimited number of customized user roles to fit your business needs. Add or remove permissions to perform tasks or limit access to select functions for ultimate flexibility.

Driver terminals

Automate your transactions with kiosks built to handle your operation and environment. Manage the traffic at unattended scales with lights, loops and gates with pre-configured workflows or your own custom criteria.

Shared data

Begin a transaction on one scale and complete it on another. Multiple users can have access on multiple workstations using a database stored on a workstation or dedicated server.
